ANDREW LIN

Los Angeles, CA in andrew-y-lin lin.andrew.y@gmail.com 510-789-3466

SUMMARY

Product Manager with 8+ years in B2B SaaS and enterprise workflow products across payments, documents, and operational data. Experienced in observing real operator workflows, redesigning them into scalable platform capabilities, and measuring results by throughput, error rates, and onboarding time. Strong technical fluency in APIs, event-driven systems, SQL/NoSQL data pipelines, and AWS, with an engineering background and hands-on LLM agent prototyping, including prompt evaluation and user research.

EXPERIENCE

Product Manager Jan 2022 – Oct 2026
KUBRA *Remote*

- Led product strategy and architecture for KUBRA HQ, a cloud-native B2B payment, document, and communication platform built on multi-tenant microservices, APIs, event-driven workflows, and distributed data infrastructure supporting utility and government clients.
- Led discovery with enterprise clients, frontline customer service representatives, and internal stakeholders; observed real work, mapped workflow problems, and translated them into platform requirements, roadmap priorities, and measurable outcomes.
- Improved client onboarding time by 97.5% while building platform capabilities supporting products representing approximately $2.5T in annual document dollars.
- Optimized an event-driven, parallelized data importer by removing dependency bottlenecks, increasing measured throughput from approximately 1 to 385 accounts/second (300K accounts in 13 minutes); implemented SLO monitoring and alerting after a production incident to detect failures earlier.
- Designed APIs and data structures for account management, client data ingestion, and contract-backed custom functions, balancing enterprise customer requirements with reusable platform primitives.
- Product manager for water-usage analytics that detect residential leaks and irrigation from meter data, working with data and engineering teams on ML-based detection and leak tracking APIs.
- Founded the UX Research function, introducing systematic customer discovery and evidence-based product development; personally conducted qualitative research to validate concepts and identify unmet needs.

Technical Product Manager Mar 2020 – Dec 2021
LegalZoom *Remote*

- Led modernization of customer document infrastructure, reducing processing errors by 99% and wait times by 90% for approximately 26K new customers per quarter.
- Analyzed technical and operational dependencies across a multi-product ecosystem to deliver unified authentication across six products through single sign-on, reducing account support burden.

Digital Product Manager Oct 2018 – Oct 2019
Bobit Business Media *Torrance, CA*

- Led the transition of multiple B2B publishing products from bespoke services to a unified SaaS platform, consolidating fragmented workflows and improving operational scalability.

iOS QA Engineer, Search Ads Jan 2016 – Nov 2016
Apple *Cupertino, CA*

- Supported the launch of Apple Search Ads with iOS 10, identifying and resolving complex product issues across engineering and cross-functional teams; the product was adopted by 61% of top-grossing apps and generated $6B in annual revenue.

Software Engineer Feb 2015 – Dec 2015
Teradata Labs *El Segundo, CA*

- Developed C software for database gateway security and evaluated AWS services as cloud counterparts to core Teradata capabilities.

AI & TECHNICAL PROJECTS

Classroom Grading Agent github.com/andrewylin/classroom_grading_agent

- Designed and built an LLM agent that automates essay grading workflows for English teachers, integrating with Google Classroom to turn a manual process into an AI-assisted workflow.
- Interviewed practicing English teachers and observed their grading workflow to define requirements, then iterated on the product based on observed needs and feedback.
- Evaluated LLM behavior, refined prompts and workflow steps to improve the usefulness of generated feedback, and debugged the agent in Python with GitHub Copilot.

AR Speedometer for Snap Spectacles github.com/andrewylin/snap-spectacles

- Independently built an augmented-reality speedometer for Snap Spectacles, from concept to working prototype, learning unfamiliar APIs using LLM-assisted tools (Cursor, ChatGPT).

SKILLS

Product	Workflow Redesign, Product Strategy, Prioritization, PRDs, User Research, Metrics
AI / LLM	LLM Agents, Prompt Evaluation, Structured Workflows, Claude, ChatGPT, Cursor, GitHub Copilot
Platform / Cloud	AWS, Kubernetes, Microservices, REST APIs, Event-driven Systems, SLOs
Data	SQL/NoSQL Data Pipelines, Looker, Tableau
Tools	Python, C++, Jira, Confluence, Figma, Honeycomb.io, Splunk

EDUCATION & ADDITIONAL

B.S. Electrical Engineering, *Cum Laude*, UCLA 2010 – 2014
Eagle Scout
